# Chongqing Caiyuanba Project

Chongqing, China

## Situation

Chongqing is an inland city located in the southwest of China in upper reaches of Yangtze River where the flood season starts from May to October. Chongqing Caiyuanba pumping station was installed beside the river. With the low installation elevation and drainage ability issues to face, the client needs an alternative to collect the rainwater and wastewater of the upstream districts and Zenit's pumping station be chosen finally.

## Solution

Pumping Station Type: BoxGRP

Pump Type:

ZUG OC100F 30/2AW

ZUG OC100F 45/2AW

## Benefits

Not only the designed height of the tank, but the diameter of the inlet and outlet are fully customized for coping the situation. UNIQA pumps assorted are the great plus to give full play to its high efficient drainage ability and energy-saving advantage.
